

## Health and Social Care Programme

With health and care systems across the UK facing significant challenges, the use of digital, data and technology has never been more important. techUK aims to support our members in navigating the complexities of the digital health, life sciences, and social care sectors and facilitate relationships with these sectors to ensure that they are equipped for greater adoption and scale of digital technologies.

### Our focus, activities and projects to be undertaken in 2025:

- Supporting techUK members to understand policy and strategic developments within the NHS, social care and life sciences in relation to the use of digital, data and technology
- Providing opportunities to showcase members' work and discuss significant sectoral developments across health, social care and life sciences with key decision-makers
- Collaborating with members to explore the implications of significant publications and technologies upon the health, social care and life sciences sectors, NHS England's Ten-Year Plan for the NHS and the impact of Artificial Intelligence.
- Convening NHS, social care and life sciences leaders at local and national levels to identify opportunities and navigate challenges faced in driving digital transformation.

## Programme Value Proposition

### Industry Access

techUK provides a collaborative environment in which industry and public sector stakeholders can work together to enable faster deployment of technology. Through our work with NHS England, the Department of Health and Social Care and its arms-length bodies, NHS Integrated Care Systems and local authorities, we ensure members are updated and prepared for commercial opportunities, understand key sector developments, and can influence and connect with decision-makers to support policy, strategy, and relationship development.

### Influence Policy

We work closely with key national, regional, and local stakeholders including NHS England, the Department for Health and Social Care, local NHS organisations and authorities to provide our members with early insight into policy and sector developments, an understanding of what this means for their business, and an opportunity to ensure the voices of the digital health, life sciences and social care industries are heard. Being part of this process helps techUK members strengthen their influence, raise their profile, and better understand the digital health landscape across the health, social care and life sciences ecosystems.

### Inside Track

techUK offers members an insight into trends and opportunities in the UK health, life sciences and social care technology sectors. We provide opportunities to strengthen relationships with decision-makers and facilitate early market engagement, helping members better plan for the future. techUK advocates that only by working closely with the supplier community will the NHS, the Government and social care authorities achieve their vision and objectives for improving the lives of citizens and the UK's digital transformation progress across the health, life sciences and social care sectors.

### Impact Performance

A major advantage of techUK membership is the opportunity to meet potential partners and like-minded innovators, collaborating to address the digital transformation challenges faced in the NHS, and social care and life sciences sectors. By providing market insight, we help members validate new ideas and build impactful strategies, ultimately ensuring that they are market-ready, with a strengthened presence in the UK health, life sciences and social care sectors.

### Return on Investment

techUK is proud to support over 1,100 companies across the UK, including both SMEs and large enterprises. These companies are helping to reduce pressure on staff and improve patient outcomes, accelerating digital transformation, driving benefits for local economies, and improving the health and lives of citizens. Members often tell us that we have helped them to grow their business, influence policy, and make lasting connections across both industry and the public sector.
