

## **SafeShark Consumer IoT Cyber Security Conformance**

**Jonathan Marshall**  
**27th October 2021**

**A joint venture between DTG  
Testing and Connect Devices  
to help manufacturers  
navigate cybersecurity  
standards for IoT**

- What are the cyber security requirements for Consumer IoT?
- Why are they coming in?
- When will they be introduced?
- How SafeShark can help

# What is SafeShark?

SafeShark and BSI launch Consumer IoT cyber security assurance scheme

- SafeShark provide cyber security testing services carried out against international standards
- Backed with certification from BSI
- A consumer facing logo can then be used to provide assurance of cyber security best practice
- Set up through DCMS funding, we work closely with UK Government and international standards organisations

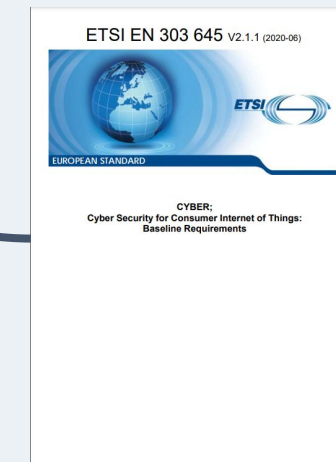

# Why were we set up

# SafeShark

The UK Code of Practice for Consumer IoT Security has developed into a European standard (EN 303 645) and test spec (TS 103 701)

Upcoming UK legislation will be based on EN 303 645

Further standards to be written for EU market access with EN 303 645 as a basis

# What are the requirements?

EN 303 645 has 13 cyber security provisions

Plus an additional section for Data Protection

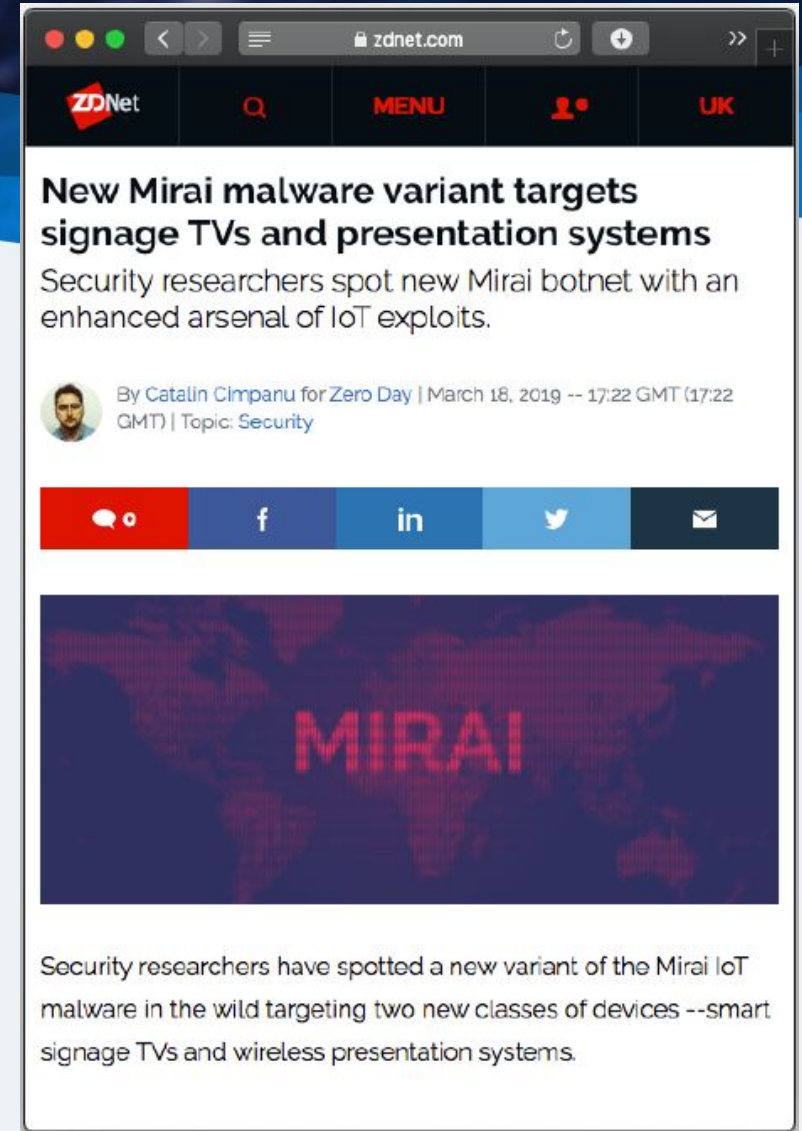

UK Legislation will be based on the first 3 provisions - **initially**

EU cyber security requirements will be via RE-D

5	Cyber security provisions for consumer IoT .....
5.1	No universal default passwords.....
5.2	Implement a means to manage reports of vulnerabilities .....
5.3	Keep software updated .....
5.4	Securely store sensitive security parameters .....
5.5	Communicate securely .....
5.6	Minimize exposed attack surfaces.....
5.7	Ensure software integrity.....
5.8	Ensure that personal data is secure.....
5.9	Make systems resilient to outages .....
5.10	Examine system telemetry data .....
5.11	Make it easy for users to delete user data .....
5.12	Make installation and maintenance of devices easy .....
5.13	Validate input data.....
6	Data protection provisions for consumer IoT .....

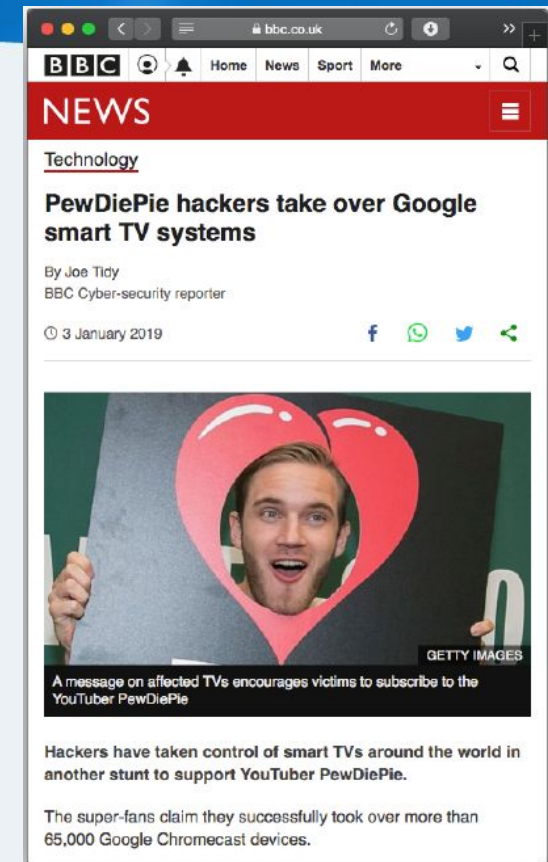

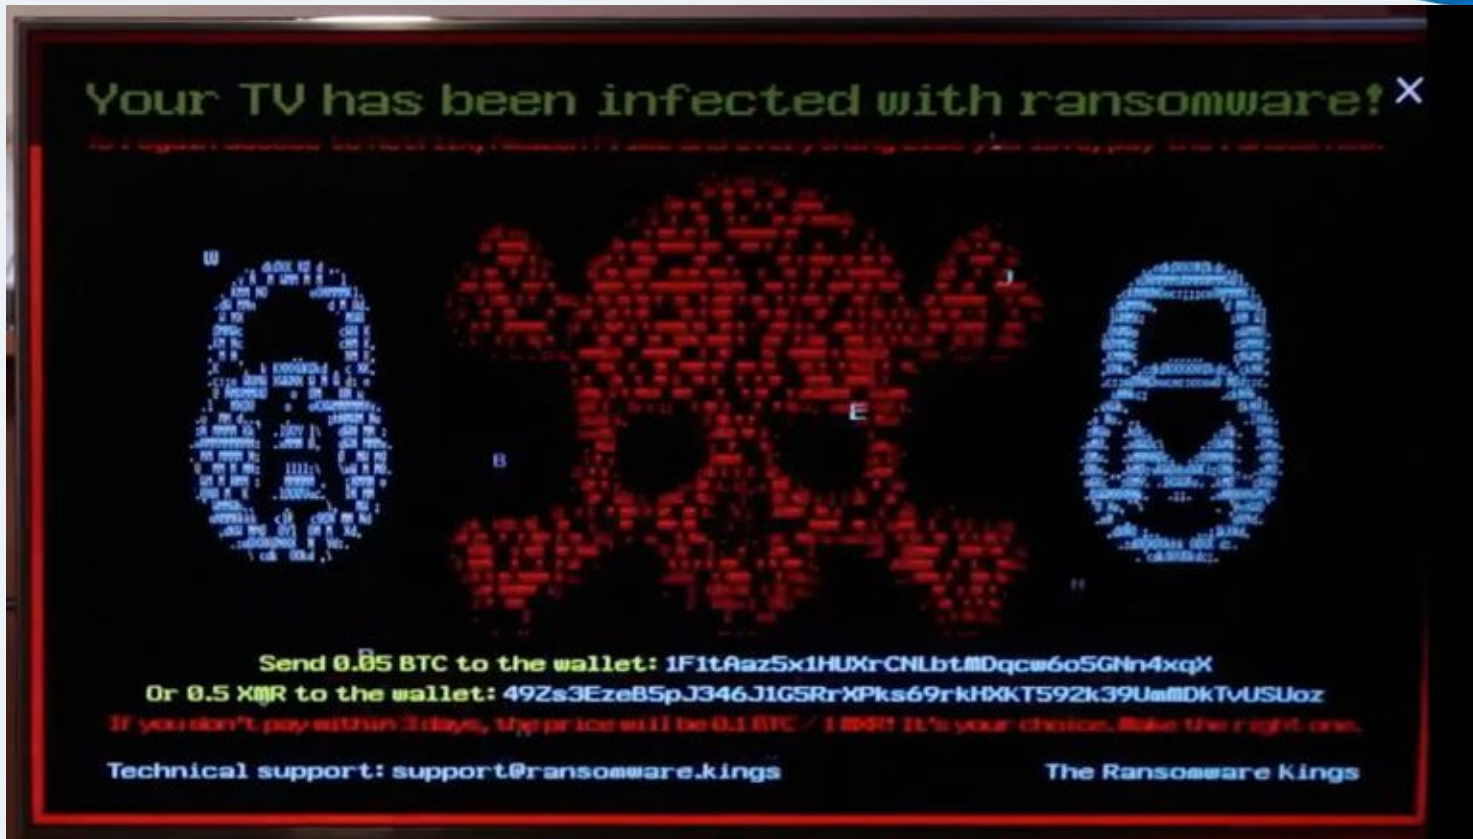

# What are the threats?

- Mirai is probably the most well known
- Creating a 'Botnet' of IoT devices to target organisations in a coordinate attack
- Targeted at consumer IoT devices including smart cameras and PVRs
- The original attack took down major websites globally

# What about my TV?

# How can SafeShark help

Incorporating multiple test standards into a single service

- A combination of expert assessment and automated objective testing
- Unique Intercept platform enabled continuous monitoring of devices
- Ensure that devices remain compliant through software updates and specification developments
- Regular reporting to manufacturers is provided to assist product development

# SafeShark testing

Intercept - the unique cyber security test platform

- The Intercept platform can be installed on any IoT device providing:
- Multiple location support
- Integrated with cloud based reporting and monitoring
- Real world data and findings

# Roadmap

When is the time to act?

- UK and EU market access requirements are under development now
- These represent a minimum baseline requirement for compliance and on their own are not enough to build trust around a product or brand
- Protect your customers, your business, your investors, your reputation, and your brand position.
- Prepare for the legislation and increasing consumer demand before this becomes a business-critical issue.
- Enhance your products and brand early on, building a reputation and trust by taking a hard consumer protection stance.

**SafeShark and BSI are working with leading manufacturers**

# Next steps

Get in touch

- SafeShark are offering free health checks on devices for a limited time
- Understand how your product performs against standards requirements
- Find out how your product compares to your sector as a whole
