

Satellite Connectivity at the UK Space Agency – New Directions in Direct to Device and Non-Terrestrial Networks

Henny Sands and Tatum Burgess
Telecommunications Team
Investment Directorate

Agenda

- Opening Remarks by Tech UK
- Introduction
- Sector Trends - New Opportunities in Satellite Connectivity
- Overview of ARTES
- Overview of Connectivity in Low Earth Orbit Programme
- Overview of Pilot Procurement Programme
- Questions

Opening Remarks

Introduction

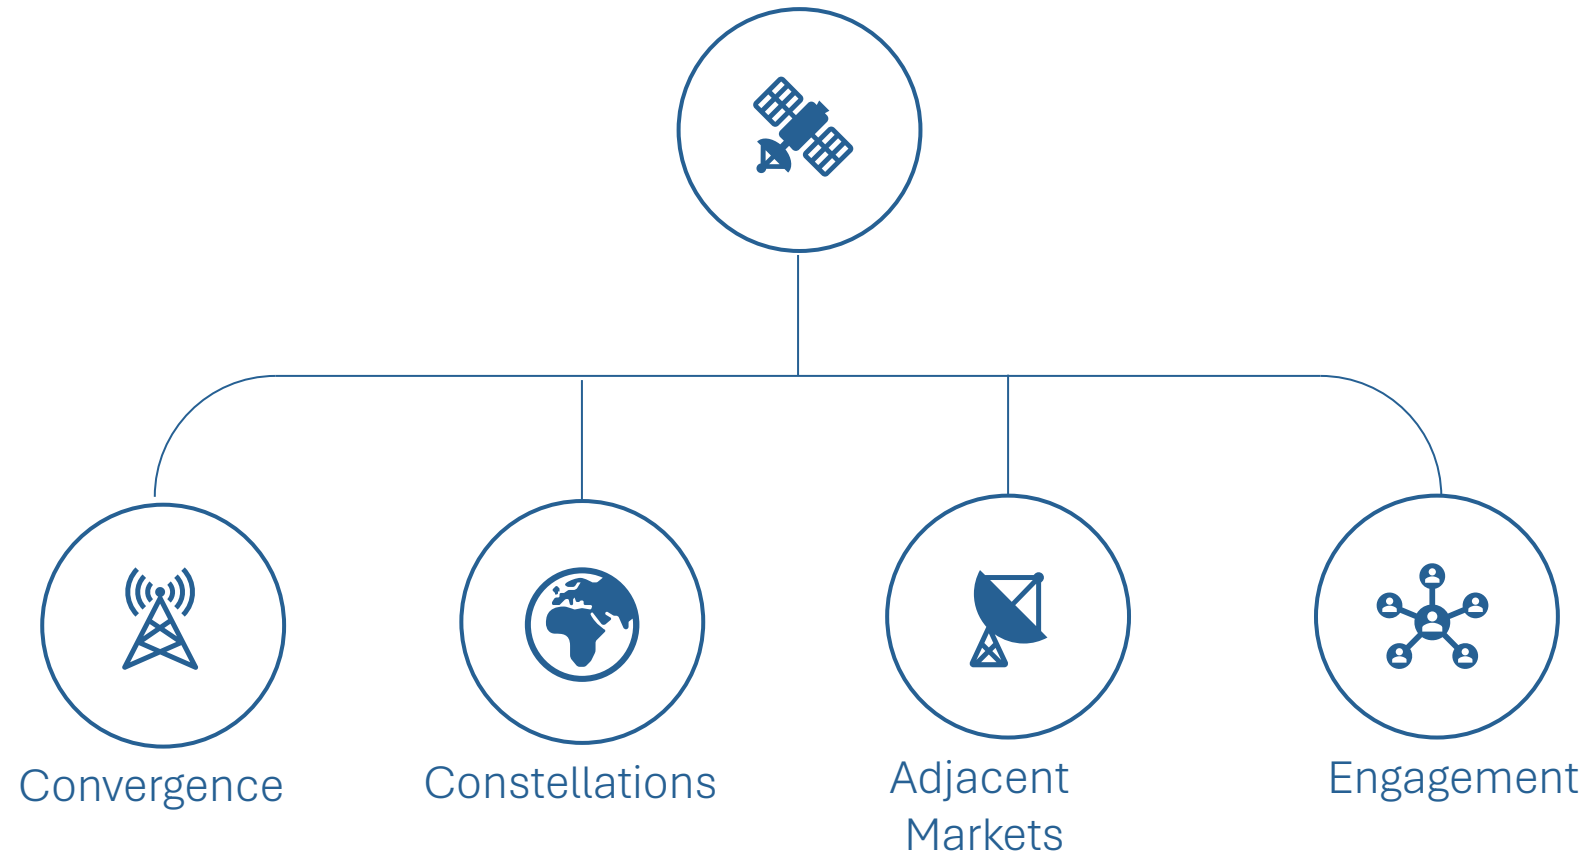

Sector Trends

UK Space Agency Priorities

- Data for citizens
 - Creating unique data and services to citizens and businesses
- Economic growth
 - Space investments return nearly 10:1 in a global economy worth c.£490bn by 2030.
- Global influence
 - Partnering on new missions and setting standards
- Threat protection
 - Space is part of the UK's CNI

Satellite Communications

Outlook and opportunities

Disrupted

Single systems

Rise of constellation market

- +Replacabilty
- +Accessibility
- +High-volume

Changing role of Geo

Disruption

Multiple systems

- +Convergence
- +Technology change
- +Consumer demand
- Market consolidation

Changing role for SatCom

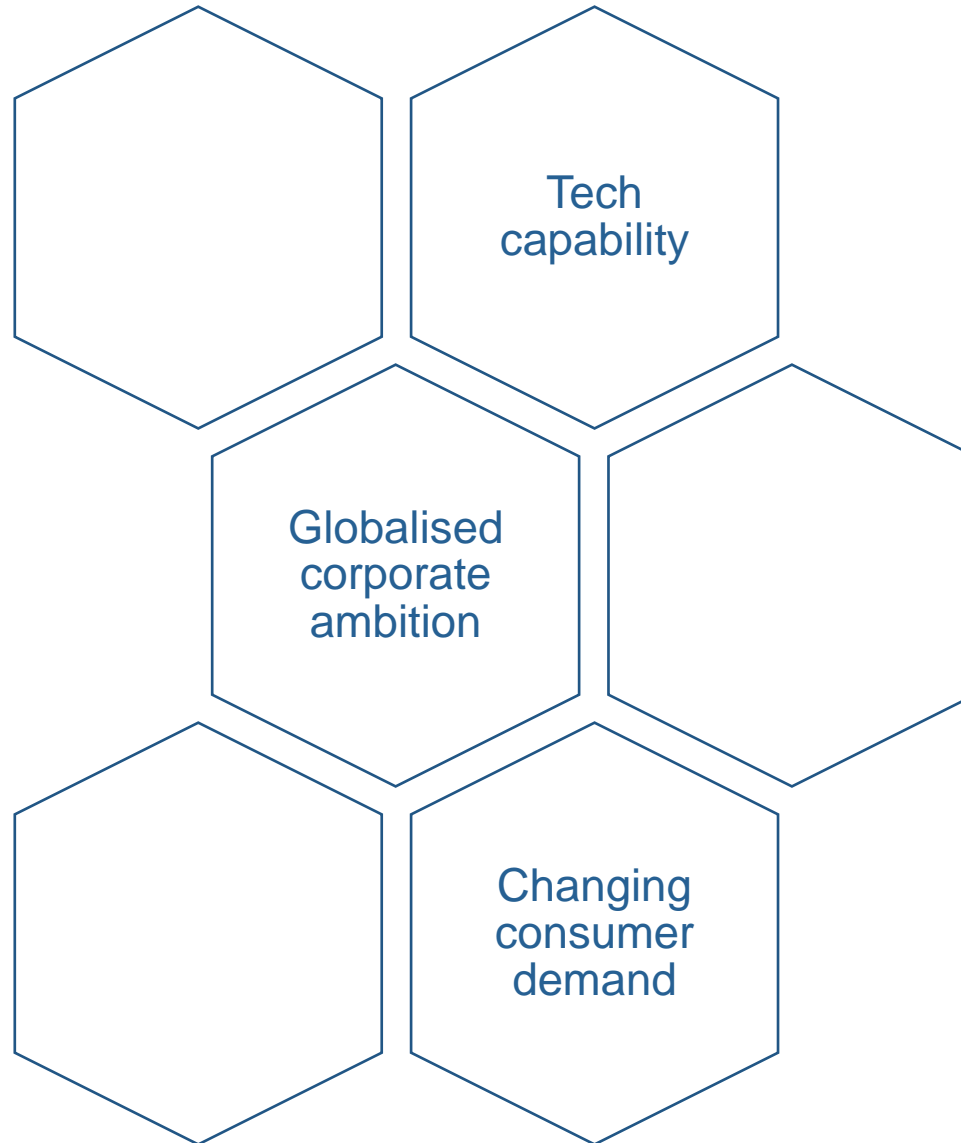

Disrupting

Network of networks

- Ubiquitous connectivity
- Rise of e2e infrastructures
- Transition to optical

Complexity

What's driving the change

Tech

Service

Consumer

Integration of Non-Terrestrial Networks

- Accelerating standardisation and interoperability
- Establishment of software defined capability
- Growth of AI-enabled systems

- New operators, suppliers, and customers
- New system architectures = re-organisation of ground and space infrastructures

- Complexity > human comprehension
- New markets and uses = new opportunities
- Enables next phase of the information age

Tech

Service

Consumer

Integration of Non-Terrestrial Networks

Direct – to - Device

- Large-scale, commercial trials
- Connecting 100's of millions of people and machines

- Maturing commercial systems
- Driving new business models
- Billions of people and 100's of billions of machines connected

- New ways of connecting people, machines and devices
- Everyone connected

Tech

Service

Consumer

Integration of Non-Terrestrial Networks

Direct – to - Device

Other end to end infrastructures

- Technology demonstrators and first commercial trials

- Connecting government infrastructures
- Mobility, borders, encryption transforms Government service delivery

- Transforms human habitation on the planet

Tech

Service

Consumer

Integration of Non-Terrestrial Networks

Direct – to - Device

New end to end infrastructures

Off-world communications

- Technology demonstrators and commercial trials

- Transition from institutional to commercial systems
- First off-world operators support exploration of the solar system

- Transformation of the Lunar economy begins
- Full convergence achieved - everyone, everywhere -

New end-2-end infrastructures

Mobility infrastructures

Auto

Aero

Maritime

Defence

Service infrastructures

D2D

Quantum

Lunar

?

Built on key capabilities

OBP

OISL + SGOL

Software-
defined space
segment

Programme Overview: ARTES

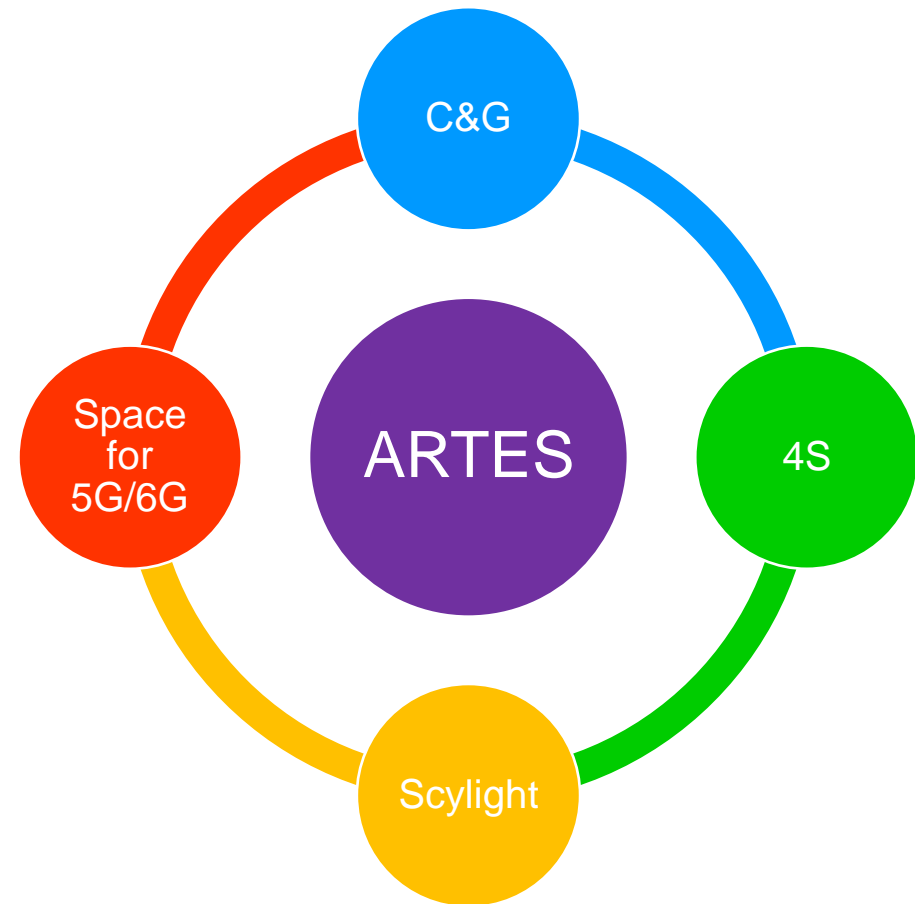

ARTES

- ARTES = Advanced Research in Telecommunications Systems
- R&D programme aimed at developing the use of space in Europe across a range of sectors and industries
- Three main elements: Advanced Technology (AT), Core Competitiveness (CC), and Partnership Projects (PP)

ARTES Programme Lines

- Generic Programme Line: Competitiveness & Growth (C&G)
- Strategic Programme Lines: 4S, Scylight and Space for 5G/6G

Programme Overview: Connectivity in Low Earth Orbit

C-LEO

- Designed to fund next generation of satellite communications development and boost UK's leadership in ever-growing global satellite market.
- Building on existing heritage in satellite design and manufacture, and support UK-based suppliers in developing the technologies needed to build the next generation of LEO satcom satellites.
- Key Technology areas: on-board (regenerative) processing, active antennas, optical inter-satellite links, networking and routing, and user terminals

Programme Overview: Pilot Procurement Programme

Pilot Procurement Programme

BT Madley Communications Site, UK

GHY-6 Antennae, Helston, UK

- Ambition to grow the UK ground segment as a resilient capability to support civil and defence applications.
- ‘Ground segment as a service’ is a necessary commercial driver for the growing lunar economy.
- Government acting as a procurer of services rather than as a grant provider.
- Contract Award Goonhilly Earth Station Ltd

Questions
