Climate, Environment and Sustainability Programme

80% of the world economy now has a legally binding net zero target. All sectors need to commit to climate action and to set robust and measurable science-based targets. With this in mind techUK is committed to helping our members, our sector, and all other industries to reach net zero. We continue to develop useful resources, to run events and to publish guidance that help organisations to reach this important goal.

Our focus, activities and projects to be undertaken in 2025:

- Making the case for a tech first net zero journey that generates growth.
- Trying to highlight to policy makers that digital tech can be an effective way to achieve growth and net zero.
- Ensuring members are heard as the UK introduces new sustainability disclosure rules.
- Identifying the barriers for government in buying sustainable tech.
- Developing new guides on how tech firms can set net zero plans and make their software more 'green'.

Programme Value Proposition

Industry Access

Tech firms must demonstrate their sustainability credentials. techUK helps our members with their net zero transition, including measurement, implementation, compliance, and reporting. We also support our members to build strong relationships, providing opportunities for members to present tech solutions that assist carbon emission reduction, circularity, and human rights goals.

Influence Policy

Climate, environment and sustainability matters are not only business critical, they are increasingly a legal requirement. ESG disclosures, supply chain due diligence, human rights, biodiversity, and greenwashing are major political and regulatory issues. Our relationships within government and regulators allow us to advocate for regulatory solutions and policy that help our members and reduce risk and cost.

Inside Track

Members have access to databases, reports, and legislative updates, plus opportunities to meet industry experts and policy makers who are at the forefront of digital sustainability. Through our regular newsletter, events, webinars and conferences we help companies to understand the sustainability landscape, to be compliant, and to adapt. As sustainability becomes essential for social license and to win business this is increasingly important.

Impact Performance

techUK helps its members to operationalise sustainability and to be compliant with ever increasing regulatory burdens, ensuring they are prepared for all outcomes. We support the industry to share best practice, as well as advocate for solutions that can be implemented without unnecessary costs. We strive to showcase member products, support business development, and raise member profiles.

Return on Investment

techUK works with its members to shape the rules and landscape in which business operates, as well as providing members with operational support and compliance guidance. As sustainability grows in importance, members have opportunities to demonstrate their tech, to showcase their expertise, to network with experts on regulation, law and sustainability, and to develop relationships critical to their growth.
